Summary

Frontend Developer with 4+ years of experience building modern, standards-compliant web applications. Strong focus on W3C compliance, cross-browser compatibility, performance optimization, and SEO, with full ownership of the frontend lifecycle from setup to production delivery.

Skills

Languages

HTML5, CSS3, JavaScript, TypeScript

Web Performance

Page speed optimization, third-party script deferral, SEO, W3C compliance, cross-browser compatibility

Tools

Git, GitHub Actions, Figma, ClickUp

Frameworks & Libraries

Angular, React, Vue, Next ,Nuxt, Remix (React Router), Tailwind CSS, Styled Components

Integrations

Google Analytics, Meta Pixel, JivoChat, Authentication

Practices

Error management, project tracking, cross-team technical communication

Work Experience

Frontend Developer Intern, Hay Teknoloji ve Yazılım A.Ş.

2022 – 2023

Contributed to web development projects while strengthening core HTML5, CSS3, and JavaScript skills in a professional environment.

Isparta, Turkey

Frontend Developer & Web Performance, Hay Teknoloji ve Yazılım A.Ş.

01/2023 – 09/2026

- Delivered production frontend applications following modern web standards and best practices.
- Focused on W3C compliance, browser compatibility, performance, and SEO across projects.
- Built interfaces with React, Vue, Nuxt, Styled Components, and TypeScript.
- Integrated third-party services including Google Analytics, Meta Pixel, and JivoChat.
- Improved page load performance by deferring third-party script execution to the end of the event loop.

Isparta, Turkey

Education

B.Sc. in Computer Engineering, Süleyman Demirel Üniversitesi

09/2020 – 07/2024

Isparta, Turkey

English Preparatory Program, Süleyman Demirel Üniversitesi

09/2019 – 06/2020

Isparta, Turkey

Projects

TUS Data [↗](#)

Built the frontend of a Turkish medical exam (TUS) prep platform from scratch, architecting a shared codebase (monorepo) that powers 5 distinct products. Reduced code duplication and development time through reusable components, and improved page speed and UX via performance optimizations.

Hayrat İnsani Yardım [↗](#)

- Developed the platform frontend end-to-end and took full ownership of the frontend lifecycle.
- Collaborated with an external backend team and managed cross-team technical communication.
- Integrated JivoChat, Google Analytics, and Meta Pixel; optimized third-party script loading.

Khairat Relief [↗](#)

Built the frontend from scratch with performance optimizations to improve page speed and user experience.

Osmanlıca Online [↗](#)

Built the frontend from scratch with performance optimizations to improve page speed and user experience.

Kurban Video Tracking System

- Developed the frontend of a Qurban (sacrifice) video tracking system for charitable organizations.
- Enabled donors to track their sacrifice via video, with authorized access and subscription-based viewing.
